

UNOX.Care Program

Protect the performance you deserve.

The UNOX.Pure filter reduces the quantity of substances in the water which contribute to the formation of lime scale and/or rust inside the baking chamber, a known cause of malfunctioning and breakdown. The UNOX filters are easy to install in any BAKERLUX SHOP.Pro™ oven or stack. For the larger ovens, Camilla and Vittoria, Unox recommends UNOX.Pure, whilst for smaller ovens, Bakery.Pure is sufficient to guarantee - in most applications - a year of worry-free work.

The MASTER and TOUCH control panels monitor the quantity of water filtered by the Bakery.Pure and UNOX.Pure systems and automatically notify you when the time has come to replace the filter, optimising its use.
